

## **The Somerset Levels and Moors Task Force:**

### **A Vision for the Somerset Levels and Moors in 2030**

***We see the Somerset Levels and Moors in 2030 as a thriving, nature-rich wetland landscape, with grassland farming taking place on the majority of the land. The impact of extreme weather events is being reduced by land and water management in both the upper catchments and the flood plain and by greater community resilience.***

- The landscape remains one of open pasture land divided by a matrix of ditches and rhynes, often bordered by willow trees. Extensively managed wet grassland dominates the scene with the majority of the area in agriculture in 2010 still being farmed in 2030.
- The floodplains are managed to accommodate winter flooding whilst reducing flood risk elsewhere. These flood events are widely recognised as part of the special character of the Levels and Moors.
- The frequency and duration of severe flooding has been reduced, with a commensurate reduction in the flood risk to homes, businesses and major roads in the area.
- During the summer months there is an adequate supply and circulation of high quality irrigation water to meet the needs of the farmers and wildlife in the wetlands. On the low-lying peat moors, water levels have been adopted which conserve peat soils and avoid the loss of carbon to the atmosphere. Water quality has improved and meets all EU requirements.
- The Levels and Moors are regarded as one of the great natural spectacles in the UK and Europe with a mix of diverse and valuable habitats. Previously fragmented habitats such as fen and flower-rich meadows have been re-connected and are widely distributed. In the north of the area over 1,600 ha are managed as reed-bed, open water and bog. Elsewhere the populations of breeding waders exceed 800 pairs. Each winter the wetlands attract large numbers of wintering wildfowl and waders regularly exceeding 130,000 birds. Wetland species such as Crane, Bittern and pollinator populations flourish.
- Optimum use is being made of the agricultural potential of the Levels and Moors, particularly on the higher land, whilst unsustainable farming practices have been adapted or replaced to secure a robust, sustainable base to the local economy
- New businesses, including those based on 'green tourism', have developed, meeting the needs of local people and visitors alike, while brands based on the area's special qualities are helping farmers to add value to the meat, milk and other goods and services that they produce.
- The internationally important archaeological and historic heritage of the area is protected from threats to its survival and is justly celebrated, providing a draw to visitors and a source of pride and identity to local communities.
- Farmers and landowners are rewarded financially for the public benefits and ecosystem services they provide by their land management including flood risk management, coastal management, carbon storage and the natural environment.
