

| | |
|--|---|
| 1. Alcohol and Bars | |
| 1.1 | No recommendations for Alcohol & Bars |
| 2. Camping | |
| 2.1 | Provide a strategy to ensure that the densities within the staff/performer camping areas are followed to prevent the risk of fire and reduce the conflict between vehicles and tents to MDC in early May so clarity can be sought before the Camping EMP is signed off. |
| 2.2 | Review the rules about camping at Cockmill Meadow family campsite to try to ensure that it is not occupied by groups of adults. |
| 2.3 | Review the safety of the route up/down the hill to Worthy View to determine whether steps or safety rails are required for installation before the 2023 festival. |
| 2.4 | Assess the safety of fire towers and the placing of fire buckets to ensure that adequate fire safety is achieved and review the timing of the collection of radios to ensure that campsite crews have access until the last shift ends. |
| 2.5 | Review the provision of water point infrastructure to campsites to ensure it is in place and operational before the public gates open. |
| 3. Crowd Safety | |
| 3.1 | Assess whether security can be improved. There appeared to be an issue with security not being able to prevent people from entering areas which had become crowded. This may be due to lack of experience of working at large scale events. |
| 3.2 | Consider the design layout of the popular nighttime areas and consider whether crowd densities could be better distributed across the site. |
| 3.3 | Revise the risk assessment to consider the potential pull of the artist, the size of the stage/arena and the demographic of the attendees and ensure you have measures in place to control the numbers entering the area. There were a number of artists that appeared to be more popular than was expected, drawing large numbers to venues which were not the principal stages. Review work undertaken to ensure areas can be managed effectively |
| 4. Food | |
| 4.1 | Bar Information Pack for bar operators - to include good practice illustration for sink and handwashing facilities and to reinforce requirement that operators need to provide connections to standpipes where these are not located in immediate vicinity of these facilities. |
| 4.2 | GFEL to work with the medical services to ensure that suspected food-borne illness resulting from food/beverages are reported rapidly through an agreed mechanism to enable prompt and effective investigation to safeguard the public. Where possible this should include the trader name/location, the food/drink consumed, symptoms and speed of onset. |
| 5. Health & Safety/Structures | |
| 5.1 | Several years ago, MDC worked with the Health and Safety Executive and GFEL on the pedestrian access to Worthy View and steps were installed. This year a new route to the camp site was put in adjacent to the path to Pennard Hill Gate. The gradient is steep and the surface made up of loose stone. It is difficult to walk up and down and could be treacherous if wet or muddy underfoot. Access to Worthy view needs to be reviewed. |

| 6. Nuisance Prevention | |
|-------------------------------|--|
| 6.1 | Continue to invest in the work on the communications plan and GFEL / MDC Liaison for intercepting and management of complaints |
| 6.2 | MDC to continue to work with the audit monitoring arrangements that allow for officers to assess during night-time hours, subject to any further identified enhancements. |
| 6.3 | MDC to explore with GFEL potential further measures or restrictions to help address excessive loudness and low frequency noise where it may cause adverse impact on the community. |
| 7. Sanitation | |
| 7.1 | It is recommended that early discussion takes place with crew and market traders to establish their specific needs for sanitation arrangements, and all toilets in catering and food business areas should have a wash hand basin with running water (rather than only sanitiser) nearby. The arrangements should be signed off in advance of the Sunday before the festival when the crew, caterers and traders arrive. |
| 7.2 | There were some reports of men urinating against the blue plastic surrounding the urinals. It is recommended that there is some signage within the urinals to deter this. |
| 8. Security | |
| 8.1 | Consideration given to providing the Eviction Team with a suitable vehicle with enough seats to transport the 4 Security Staff, Independent Monitor and evictee as one unit |
| 8.2 | Consideration given to having the Compliance Team Leader attending the Security Working Group to facilitate early engagement with MDC Compliance Staff |
| 8.2 | Consideration given to review Wi-Fi provision |
| 9. Structures | |
| 9.1 | It is recommended that Building Control officers continue to liaise with Festival representatives throughout the year to discuss any issues regarding stability of structures and venues. Engagement with the festival liaison meetings at an earlier stage may help to resolve any issues regarding siting/relocation of existing venues or structures and the introduction of new structures. |
| 10. Taxi | |
| 10.1 | Consideration given to review the off-peak provisions for refreshment area at bronze gate |
| 10.2 | Consideration given to the Monday after the festival, taxis and PHV's be allowed to go through the A37 / A361 junction road closure |
| 10.3 | Consideration given to review the signage at gate A regarding bus information |
| 10.4 | Consideration given to non MDC taxis and them being challenged and removed when at the drop and collect point at the Bath and West and the bronze gate taxi rank |
| 10.5 | Consideration given to improve the briefing of staff and volunteers for bronze gate and A37 / A361 junction |
| 10.6 | Consideration given to increase the speed limit signage and review bronze gate design to reduce speeding |

| 11. Water | |
|---------------------------------------|---|
| 11.1 | It is recommended that adequate and appropriately placed water points, together with adequate drainage, are installed for crew catering in good time before the festival. There should be early liaison with the crew and traders to establish the water needs prior to the festival period. These water points should be signed off before the market traders arrive on the Sunday before the festival. |
| 11.2 | It is recommended that red stickers should only be used when a supply point should not be used at all, and that all arms of the same supply should show similar stickers. A different way of marking the tap point should be used if simply to show which taps had been sampled unless this is intended to take it out of use. |
| 11.3 | It was noted at Williams Green that a large number of people were filling bottles from a tap point that was clearly intended for plant watering and with a hose connector in place. This was rectified when reported. It is recommended that any plant watering connection with a hose connector is kept separate from drinking water points. Whilst the water is potable, the presence of a hose connector can be a source of contamination from earth or the hose itself and is not easily cleaned. |
| 12. Waste & Sustainability | |
| 12.1 | Look to expand the use of reusable cups across the festival. Although paper cups are a better alternative to plastic, the amount of paper cups littered was clearly visual. |
| 12.2 | Continue to work with areas across the festival around messaging on reducing waste created and how to recycle more waste produced. Reuse were trialled in some locations so look to see how this can be expanded and replicated |
| 12.3 | Although things like single use plastics and disposable vapes are not sold on site, they are still seen in the waste streams. Focus further on educating attendees about the waste they bring onto site and the environmental impact this has |
| 12.4 | Continue to review the availability of local suppliers to focus on reducing delivery milage. |
| 12.5 | In areas of high waste generation such as the bins around the bottom of the Pyramid stage explore possibilities to prevent waste overflow either through additional bins, collections or increased litter picking. This is strongly linked to point three regarding educating attendees about reducing and recycling waste |
